

Exploring Docker:

A guide for Absolute Beginners

OCTOBER 13, 2021

19:00 | ONLINE

Agenda

19:00 – 19:15	Welcome & Introductions
19:15 – 20:00	“Exploring Docker: A guide for Absolute Beginners ”, Tetiana Boichenko
20:00 - 20:30	Q&A and Networking

WWCode story

Our mission is to inspire women to excel in technology careers.

We envision a world where women are proportionally represented as **technical leaders, executives, founders, VCs, board members, and software engineers.**

<https://www.womenwhocode.com/about>

WWCode Kyiv activities

- Join our events
- Speak at our events
- Find a mentor or be a mentor
- Get discounts or free tickets
- Find job opportunities or share them
- Communicate
- Become a volunteer

Volunteering with Women Who Code Kyiv

Code of conduct

- Please, be respectful and nice to other people in WWCode community.
- We value your safety and security and strive to have an inclusive community.
- Therefore, we do not tolerate harassment of members or event participants in any form.
- If you would like to report an incident, please, contact our leadership team.

Let's go !

Who use Docker?

 Service Provider	 Healthcare & Science	 Financial Services	 Tech	 Insurance	 Public Sector
  	   	    	    	   	   

What is

docker

?

Let's forget about Docker for a second

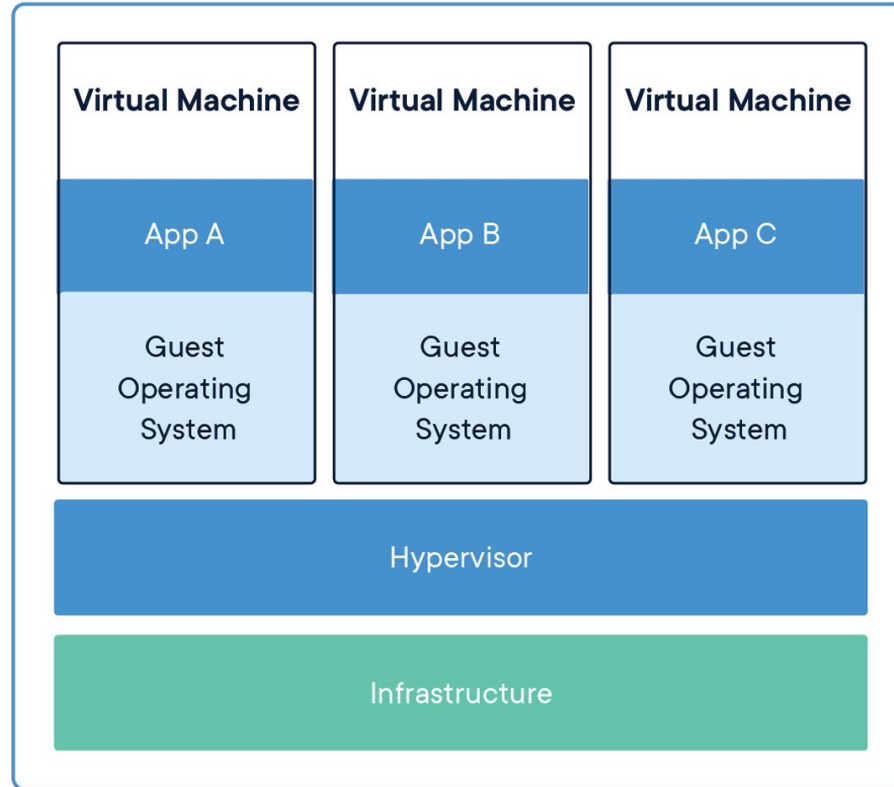

but I can use VM for it

What is virtual machine?

What is virtual machine?

Docker vs VM

Virtual Machine - isolated system

Do not depend on current system environment

Universal

Security

Docker vs VM

Virtual Machine - isolated system

Do not depend on current system environment

Universal

Security

If something goes wrong ...

Docker vs VM

If something goes wrong.. BOOM :)

Manual work (OS installation, environment set up)

Slow (full OS emulation)

Download

Install

Troubleshoot Issues

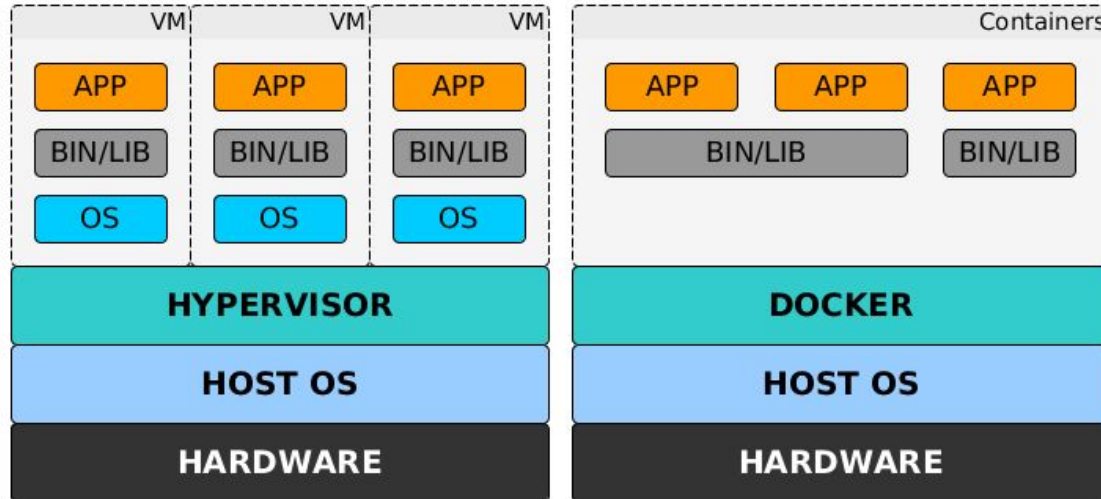

Use Docker!

Docker Advantages

Fast - no OS installation, using parts of current system

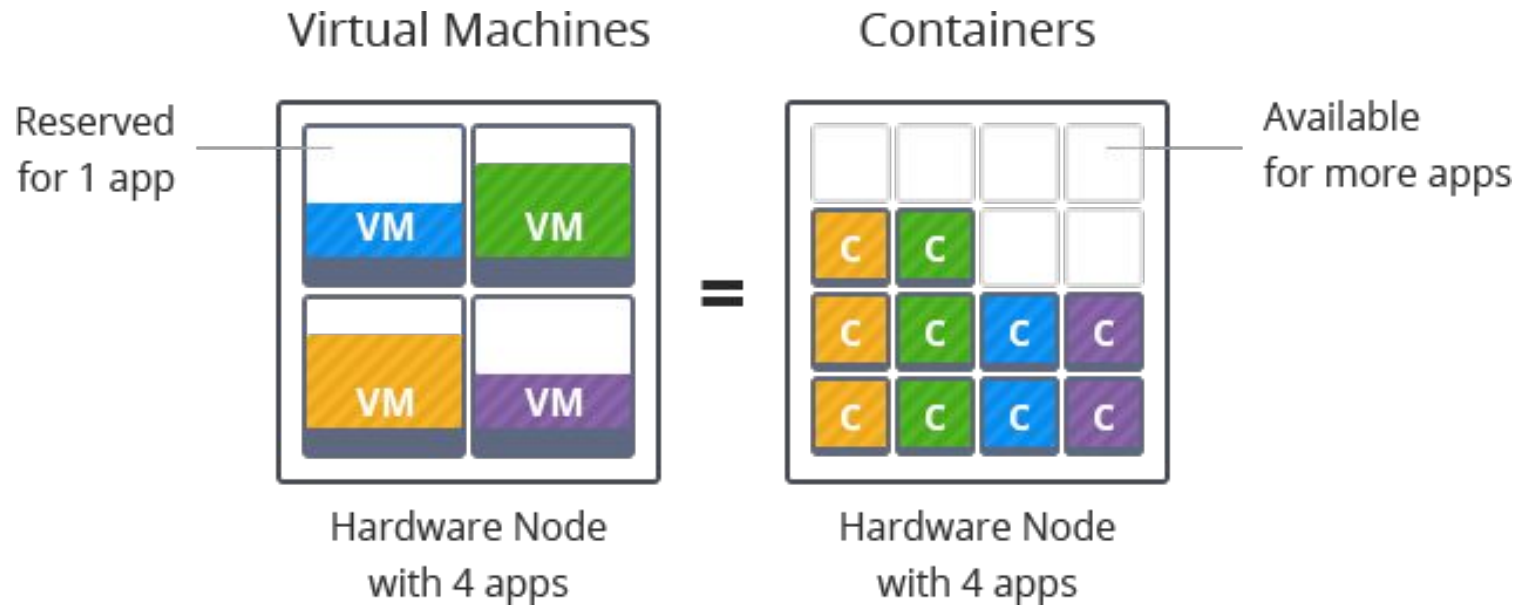

Resources usage efficiency

Running multiple instances at the same time with no penalty, reusing unchanged data

Docker Advantages

No resources reservation

Docker Advantages

Easy to set up - script base images

Automated tests, which may be used for Build Server

Easy to bind together - run and test services communication (integration tests)

Easy compatibility tests (e.g. new Frontend with old Backend)

Easy to deploy and migrate - additional abstract layer.

You are sure it will be the same on Production as you tested.

Why do we need it ?

- Easy test piece of software
- Easy run different software versions at the same time
- Easy compatibility testing (e.g. new frontend + old backend)
- Easy to create automation tests
- Easy deploy piece of software
- Fast
- Free

TASK: Test software without installation

Virtual Machine - isolated system

Install OS

Install needed environment

Copy binary files in proper place

Copy configuration

Run if you can

*If something changed - repeat with
manual copy with possible human error*

Docker - full environment isolation

Write small script, more like
configuration, which does all we need

Copy binary files in proper place

Copy configuration

Install needed environment

Build image and run if you can

*If something changed - build image
and run if you can. It's automated
already*

Docker Limitations

No interaction

Test native UI ? - Go back to VM

Ideal - web services (backend + frontend), server services

Docker Limitations

System type dependency

Native: Lin on Lin (docker is Linux product after all)

over VM: Win on Win, MacOS on MacOS, Lin on Win, Win on Lin

Ideal - same system containers

Win and Mac is not true Docker

This is Linux VM with Docker

Installation: Community Edition VS Enterprise Edition

Capabilities	Community Edition	Enterprise Edition Basic	Enterprise Edition Standard	Enterprise Edition Advanced
Container engine and built in orchestration, networking, security	✓	✓	✓	✓
Certified infrastructure, plugins and ISV containers		✓	✓	✓
Image management			✓	✓
Container app management			✓	✓
Image security scanning				✓

→ Based on the same open source code - no difference in base functionality

→ Support

→ Images and plugins certifications

→ Vulnerability scan

Linux Installation

No problem, just install it

Ordinary user should be added to the docker group

Note: watch the space, `/var/lib/docker`

Windows Installation

Docker for windows needs HyperV, which means All other Hypervisors will be disabled

Dual Boot (with HyperV or without)

Ordinary user should be added to docker-users group and restart

Note: switch to proper containers type Linux or Windows

Note: watch the space, change target directory

I set up the docker... and then what we do

Images vs Containers

- Image is buildable and static
- Container is runnable.
- We can run any number of containers out of the same image

Where to find Docker images?

- Central images repository
- There are already base images available there
- You can register your own images for the public

Docker CLI

- docker run
- docker images
- docker ps
- docker start | stop | restart
- docker build
- docker rm
- docker rmi
- docker inspect

Demo Time

Exploring Docker: workshop

COMING SOON
